

Serenergy awarded \$657,192 subcontract on a US Army contract.

Serenergy, as part of a team comprised of **Altex Technologies Corporation**, **Serenergy**, the **Dewey Electronics Corporation**, and the **Pennsylvania State University**, has been awarded a contract to develop a 10-kWe fuel-cell-based APU operating on JP-8 (MIL-DTL-83133F with up to 3,000 ppmw sulfur) by the US Army's Tank Automotive Research, Development and Engineering Center (TARDEC). The effort, being led by Altex Technologies Corporation with SerEnergy as a major subcontractor, has a base effort with \$5.2 Million for developing and testing the APU system and up to an additional \$7.9 Million in contract options for integration of the APU system into ground combat vehicles.

Serenergy, under a \$657,192 subcontract (up to \$1.1 Million if the US Government exercises the contract options), will improve its already compact stack to produce a highly compact fuel-cell subsystem, and, along with Altex Technologies and Dewey Electronics will integrate the fuel-cell subsystem and its electronic control systems into the APU by September 2013 followed by vehicle integration and testing under the contract options.

About Serenergy

Serenergy is a leading Danish HTPEM fuel-cell manufacturer founded in 2006. The company is based in Hobro, Denmark with focus on development and sales of fuel cell modules and mobile battery chargers in general.
